SUMMARY

AWS Cloud & DevOps Engineer with hands-on experience in designing, deploying, and managing scalable cloud infrastructure using core AWS services. Skilled in automation, CI/CD pipelines, and infrastructure as code, with a strong focus on building secure and cost-efficient cloud solutions.

EXPERIENCE

Technical Support Engineer – Orbit TechSol

(Nov 2025 – Present)

- Supported production environments by monitoring application health and ensuring system availability in coordination with DevOps and operations teams
- Assisted in incident detection and resolution using monitoring outputs and system logs for faster RCA and downtime reduction
- Worked with infrastructure and support teams to troubleshoot deployment and runtime issues in cloud-hosted environments
- Participated in operational activities related to cloud system stability, performance tracking, and service reliability
- Collaborated with cross-functional teams to improve release processes and reduce production issues
- Assisted in analyzing system errors and supporting corrective actions for recurring operational issues
- Contributed to maintaining SLA compliance by ensuring timely response and resolution of system incidents
- Supported onboarding and knowledge transfer for internal tools, workflows, and operational processes.
- Streamlined deployment workflow, achieving faster and more reliable release cycles.

Senior Associate – SBILife Insurance LTD

(June 2023 – Nov 2025)

- Provided operational support for enterprise applications with exposure to backend systems and web-based platforms
- Handled ticketing, incident tracking, and issue resolution for system-related and customer-impacting problems
- Coordinated with technical and business teams to ensure smooth functioning of application workflows
- Supported daily operational activities ensuring system availability and process continuity
- Maintained SLA adherence by prioritizing tasks and ensuring timely resolution of service requests
- Assisted in identifying recurring issues and supporting process improvement initiatives
- Worked with internal teams to ensure stability of business-critical applications and workflows

Projects

CI/CD Pipeline with AWS DevOps Tools

- Designed and implemented a CI/CD pipeline using AWS CodePipeline to automate build, test, and deployment workflows.
- Managed source code using AWS CodeCommit, enabling secure and version-controlled code integration.
- Integrated AWS CodeBuild for automated compilation, testing, and artifact generation.
- Deployed applications using AWS CodeDeploy to ensure reliable and repeatable releases.

Automated CI/CD Pipeline with Jenkins, Docker & AWS

- Built a fully automated CI/CD pipeline using Jenkins, enabling continuous integration and deployment for a Node.js application
- Configured GitHub webhooks to trigger pipelines on every code commit, ensuring rapid feedback and integration
- Developed and deployed Dockerized applications using Docker, improving portability and consistency across environments
- Provisioned and managed deployment infrastructure on Amazon EC2, including security group and SSH configurations

- Streamlined deployment workflow, achieving faster and more reliable release cycles.

AWS Containerized Deployment Pipeline (ECS, ECR, Fargate)

- Designed and deployed a scalable container-based application architecture using Amazon ECS with AWS Fargate, eliminating server management overhead
- Built, tagged, and managed Docker images in Amazon ECR for version-controlled deployments
- Containerized a Node.js application using Docker to ensure portability across environments
- Configured IAM roles and permissions using AWS IAM for secure service-to-service communication
- Enabled centralized logging and monitoring through Amazon CloudWatch, improving observability and troubleshooting
- Improved deployment scalability and reliability using cloud-native DevOps practices.

Enterprise-Grade Scalable Web Application on AWS

- Designed and deployed a highly available web application architecture using Amazon VPC with public and private subnets for secure network isolation
- Hosted application on Amazon EC2 instances behind Elastic Load Balancing to ensure high availability and traffic distribution
- Implemented auto scaling using AWS Auto Scaling to dynamically adjust compute capacity based on demand
- Utilized Amazon S3 for scalable storage of static assets and application data
- Configured secure access control using AWS IAM following least-privilege principles
- Enabled cross-environment communication using VPC Peering for secure connectivity between VPCs
- Implemented monitoring and alerting using Amazon CloudWatch for performance tracking and system health visibility
- Enabled audit logging and activity tracking using AWS CloudTrail for security and compliance
- Configured automated backup and recovery strategy using AWS Backup to ensure data durability and disaster recovery
- Monitored and optimized infrastructure costs using AWS Cost Explorer.

EDUCATION

Bachelor of Engineering | Vidyalankar Institute of Technology | 2023 | 8.87 CGPA | EXTC

Diploma In Engineering | Government Polytechnic Mumbai | 2020 | 86% | Electronics Engg

SKILLS

• GIT and GitHub • AWS Cloud Infra and Services • Cloud Network and Infra Security • Monitoring and Cost optimization	• Python and Bash • Linux • Docker • CI-CD pipeline and Automation
---	--

CERTIFICATION

- AWS Certified Cloud Architect- Associate.
- Oracle Certified Cloud Architect- Associate.
